

AI Reference Report - Assignment 02 Web Mario

AI Tool(s) Used: OpenAI Codex / ChatGPT coding assistant.

Scope of Usage: The assistant generated and refined the Cocos Creator implementation in this project.

Files assisted: assets/Scripts/GameManager.ts, assets/Scripts/bird.ts, assets/Scripts/menu.ts, assets/Scripts/anchor.ts, README.md, AI_reference.pdf.

Implementation summary: Cocos Creator 2.4.8 project using a runtime-generated Mario game scene, including menus, level select, player physics, collision handling, enemies, question blocks, coins, mushroom power-up, UI, sounds, and build/deployment notes.

Prompt summary: The user asked the assistant to complete Web Mario in Cocos Creator without requiring manual drag-and-drop scene setup or inspector value entry.

Refinement and explanation: The project was based on the provided Cocos tutorial project structure. Mario assignment assets were copied into assets/resources/AS2_source. GameManager.ts programmatically creates all gameplay nodes and values at runtime, so the user only needs to open the project in Cocos Creator and use Preview/Build.

Important note: Review this report and add any additional screenshots, prompts, or manual edits required by the course policy before final submission.
